

96" x 60" x 1 1/2" Walnut Top

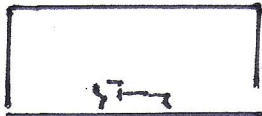

- base is tube steel heavy gage 6" wide
- understanding wood movement could be up to 3/8" side to side
- my thought was to route channel to hold angle iron knowing that side A could be securely fastened down and every other hole would be elongated allow for movement

OR

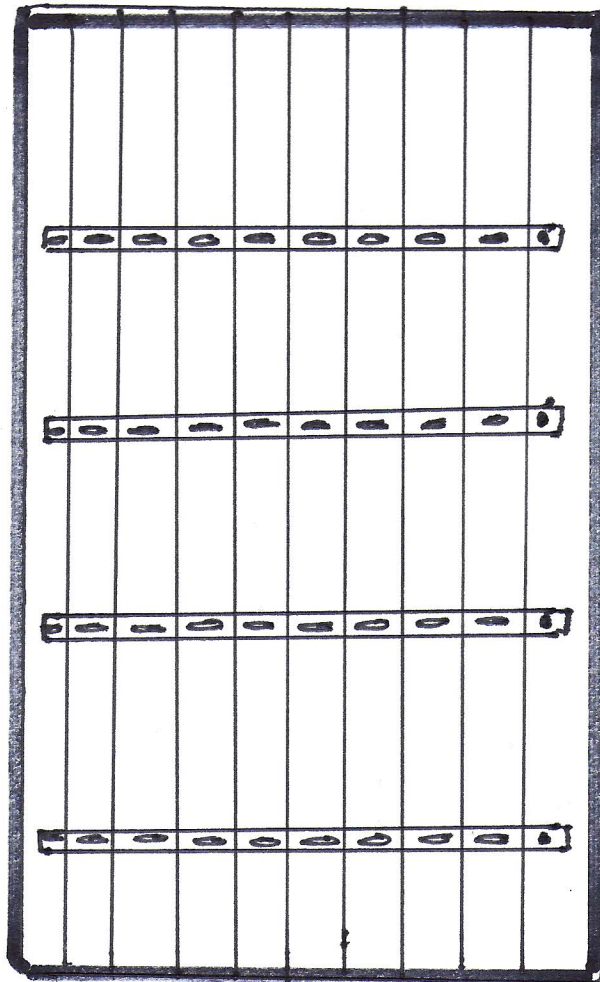

- use table mounting hardware that would just be screwed to wood and ride along recessed angle iron
